

Cartridges for filtration

Filters spun in Polypropylene (Dim-SPUN Line)

The cartridge filters of the SPUN line are made of expanded polypropylene. Its large filtration area ensures the reduction of the number of cartridges and the required housing dimension. Its **long service life and high flow velocity** mean low investment, and less labor in many applications. They are ideal for **treatments with Reverse Osmosis**.

They are suitable for filtering fluids in a **wide range of critical applications**, and their design makes the filters have a **high efficiency**. SPUN line cartridge filters are available in a **wide range of configurations** for most commercially available filter housings.

General Properties

- Homogeneous filtration in depth and with greater performance.
- Pressed filter with great resistance to compression.
- Made of expanded polypropylene fiber.

Main Applications

- Prefiltration in reverse osmosis.
- Injection in deep wells and purification of gases.
- Water treatment in the pharmaceutical, sanitary and chemical industry.
- Industrial processes related to drinking water, food and residential water.

Technical Characteristics

- Efficiency: Superior to 95%.
- Maximum pressure: 6 bar.
- Maximum temperature: 80 °C.
- Maximum differential pressure: 0,8 bar.
